

ONTARIO'S

NEXT GENERATION OF JOBS FUND

The pace of innovation is accelerating – and we can help you stay one step ahead.

Multi-billion dollar industries are emerging where virtually nothing existed a decade ago. The green revolution is re-shaping whole markets. New services are transforming how we communicate and connect.

We're looking for investment partners who see these as opportunities, companies that want to be at the forefront of change.

The Next Generation of Jobs Fund is a five-year, \$1.15 billion strategy that can help innovative companies take the lead in worldwide markets which offer long-term growth potential.

Support is available for high impact, large scale projects. It could be developing new bio-based materials or breakthroughs in digital communications. It could be cutting-edge pharmaceutical research or advanced manufacturing. Or it could focus on a fast-growing area in the global financial services sector.

If you have a project that can create good knowledge-based jobs in Ontario, you should take a closer look at our Next Generation of Jobs Fund.

How it works

The fund is modeled after our successful \$500 million Ontario Automotive Strategy. Industry support for that program generated more than \$7 billion in total new automotive investments.

The Next Generation of Jobs Fund will support a wide range of 'new economy' investment projects including:

- green auto research, parts production and assembly
- clean fuels research, development and commercialization
- environmental technologies, clean industries and bio-economy
- advanced health technologies
- digital media and information and communications technology
- pharmaceutical research and manufacturing
- financial services
- anchor investments to support cluster development (including the services sector)
- investments that are uniquely advantageous to Ontario.

Funding criteria

15% or more is available to support companies making new investments that:

- help establish Ontario as a global leader in an emerging market
- projects over \$25 million or that secure at least 100 good jobs for Ontarians
- reduce greenhouse gas emissions in certain sectors
- build on existing expertise in areas in which Ontario has a strong research and commercialization base or create new expertise, and
- create synergies among researchers, industry and entrepreneurs.

Building a bigger competitive advantage

Innovation capacity is a competitive strength for companies, and we're helping Ontario companies grow stronger through a range of other innovation incentives.

- The \$160 million Ideas-to-Market strategy supports emerging companies
- The Ontario Research Fund is investing \$527 million over five years to help Ontario's brightest researchers move their new ideas from labs to the global marketplace.
- Our \$500-million Advanced Manufacturing Investment Strategy helps manufacturers integrate innovative new technologies and develop next-generation products.
- Our R&D tax incentive program can reduce the after-tax cost of every \$100 in R&D expenditures to less than \$41.

A premier location for growing companies

As Canada's economic powerhouse, Ontario has what companies need to thrive in global markets:

- a deep talent pool of highly skilled workers
- a central location in one of the world's biggest markets
- a broad base of export-oriented advanced manufacturers and service providers
- internationally renowned research facilities and scientists
- a business cost environment that is among the lowest in the G7.
